PERSON 1

FinResearch AI

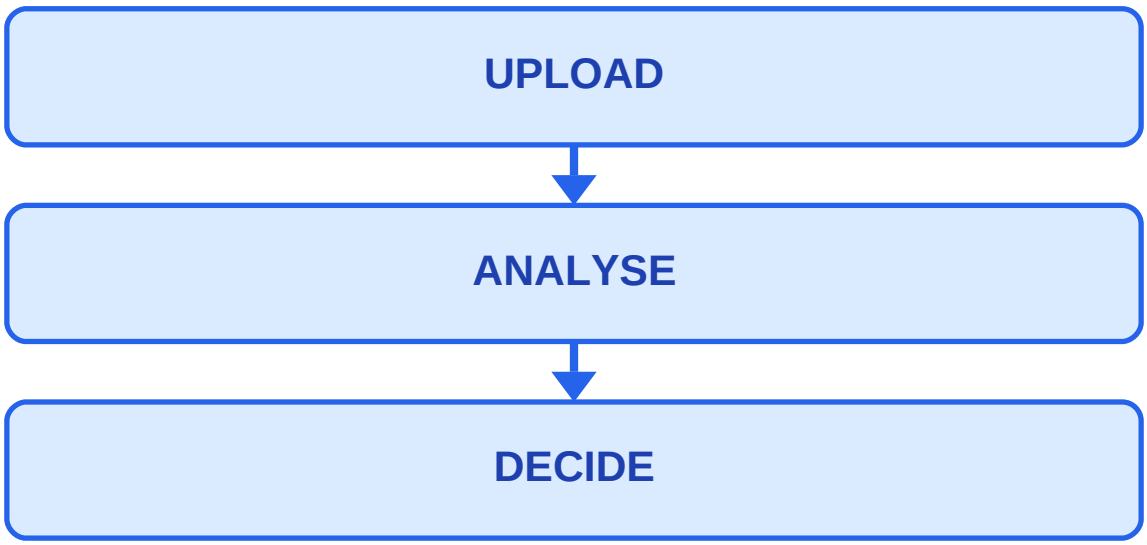

Multi-Agent Financial Research System

PROBLEM

- 100+ page reports.
- Hours to analyse.
- AI chat tools invent numbers.
- No sources. No trust. No speed.

How We Solve It

- Upload -> 8 agents analyse -> trusted answers
- 26 metrics. Risks with exact source quotes.
- Research. Benchmark. Reports.
- Every number carries its evidence.

Why Multi-Agent?

- **One big AI prompt = one black box.**
- **8 agents = 8 focused jobs + 8 fallbacks.**
- **Numbers by CODE. Language by AI.**
- **Testable. Auditable. Explainable.**

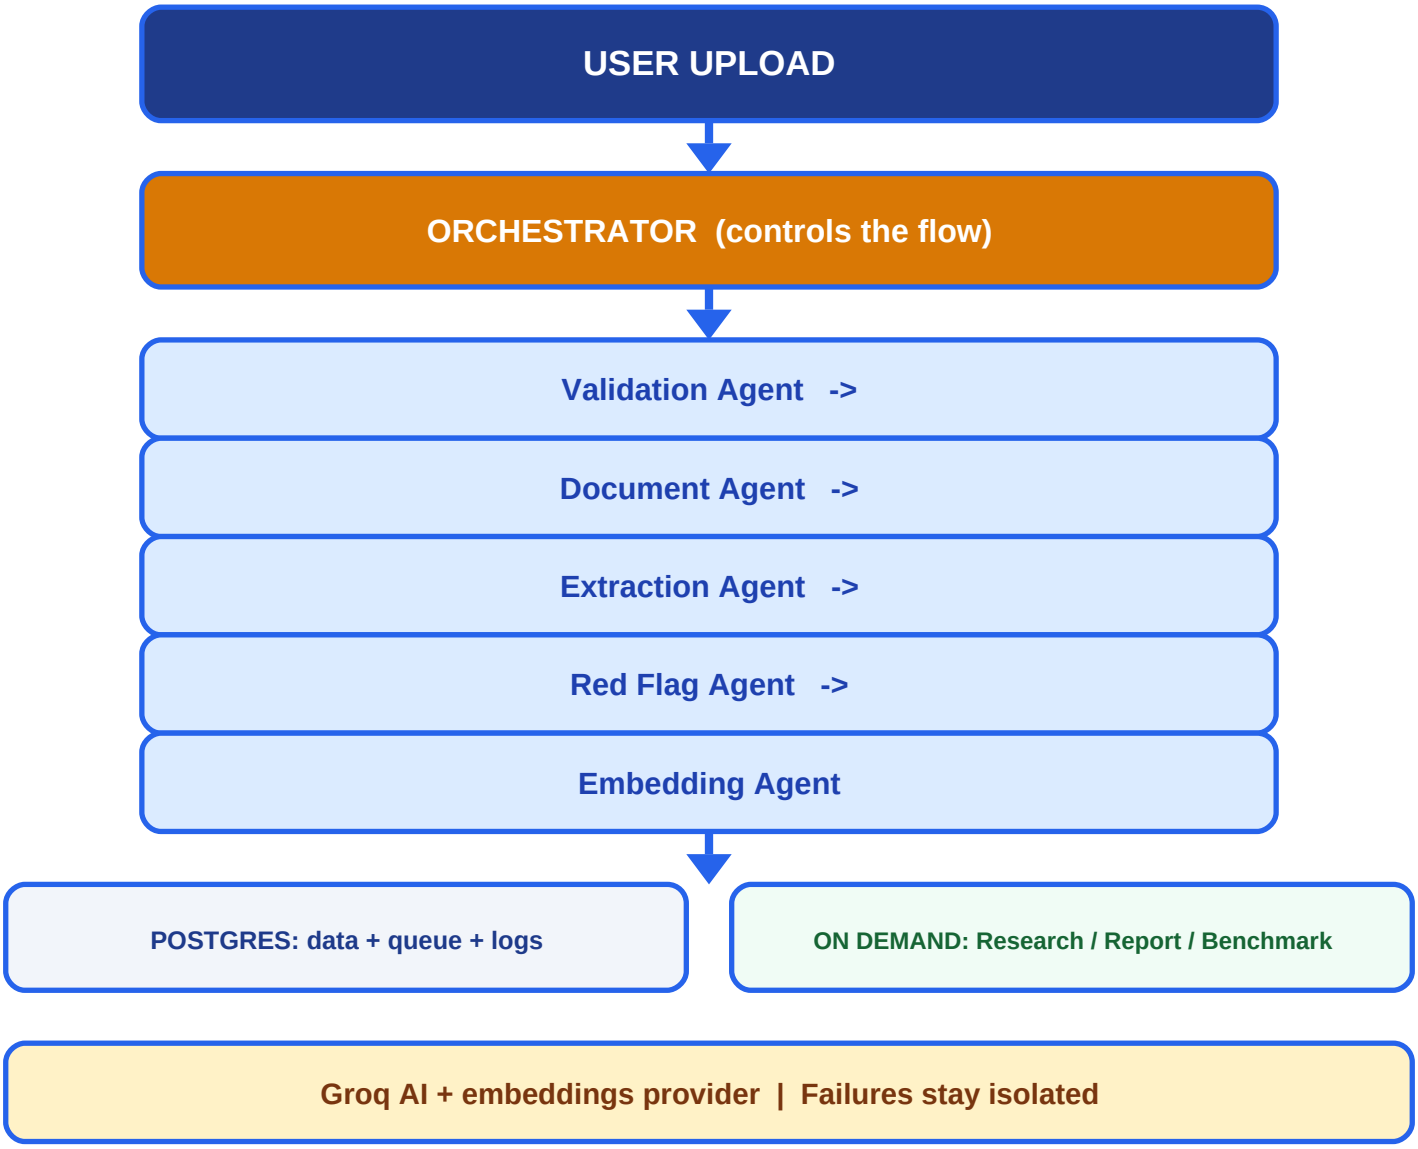

[x] Single LLM

Hallucinates. No sources. One failure kills all.

[v] Multi-Agent

Verified numbers. Cited answers. Resilient.

How Agents Interact

PERSON 3

Automatic on Upload

The Agents (1/2)

Validation	Right document type? Reject the rest.
Document	Chunks + indexes. Makes it searchable.
Extraction	26 financial metrics + source evidence.
Red Flag	Risks from filing language. Exact quotes.
Embedding	Semantic search. Optional + provider-agnostic.

PERSON 3

On Demand

The Agents (2/2)

Research	Answers with [S1] citations. Never invented.
Report	Tables by code. Narrative by AI.
Benchmark	Company vs company. Period-safe.
Orchestrator	Queues. Retries. Isolates every failure.

Each agent = one job, one test surface, one fallback.

Measuring The Metrics

- **26 metrics per document**
- **Regex label parser = exact numbers**
- **Growth. Margins. Ratios. Cash flow.**
- **Every metric stores its source line.**

```
Total revenue:
$383,285 million

Evidence: exact filing line saved
```

Quality gate: answers must match source text

Built To Be Reliable

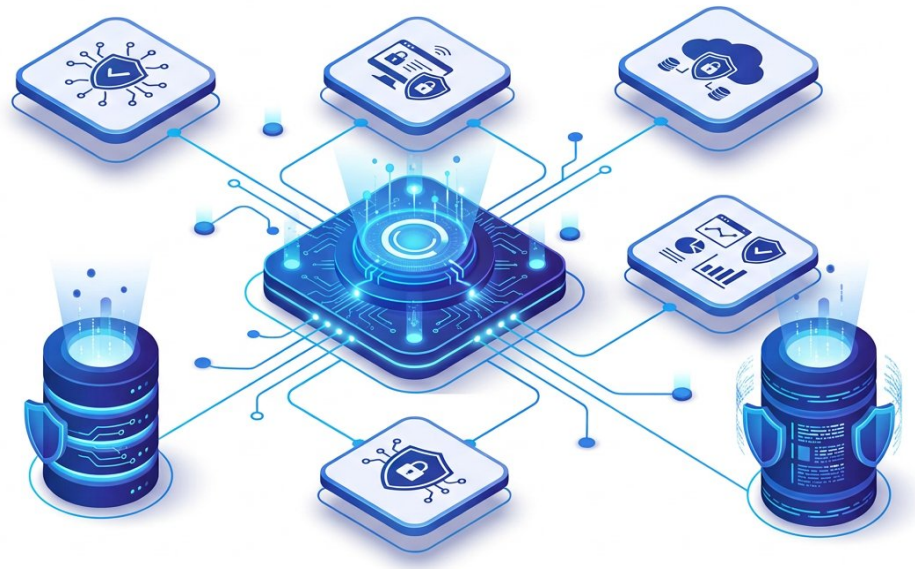

- AI down? Deterministic rules take over.
- Embeddings off? Keyword search works.
- One stage fails? Pipeline continues.
- Background jobs + automatic retries.
- Secure: hashed keys. Scoped data.

AI offline	->	Rule-based mode
Bad PDF	->	Clear, exact error
Stage crash	->	Status: partial

The System Today

AGENTS	METRICS	APIs

12	$0
TABLES	COST

Live demo:

Upload -> Risk flags -> Research -> Report

Tested. Deployed. Free-tier ready.

PERSON 5

Why It Matters

- Trustworthy AI -- every claim cited.
- Multi-agent = robust by design.
- Built. Tested. Deployed. Free.
