PERSON 1

FinResearch AI

Multi-Agent Financial Research System

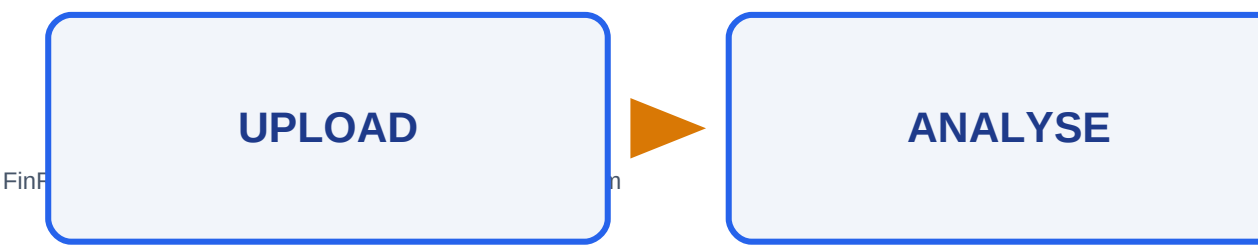

PROBLEM

- 100+ page reports. Hours to analyse.
- AI chat tools invent numbers.
- No sources. No trust. No speed.

PERSON 1

How We Solve It

- Upload -> 8 agents analyse -> trusted
- 26 metrics. Risks with exact source q
- Research. Benchmark. Reports.
- Every number carries its evidence.

PERSON 2

Why Multi-Agent?

- One big AI prompt = one black box.
- 8 agents = 8 focused jobs + 8 fallback
- Numbers by CODE. Language by AI.
- Testable. Auditable. Explainable.

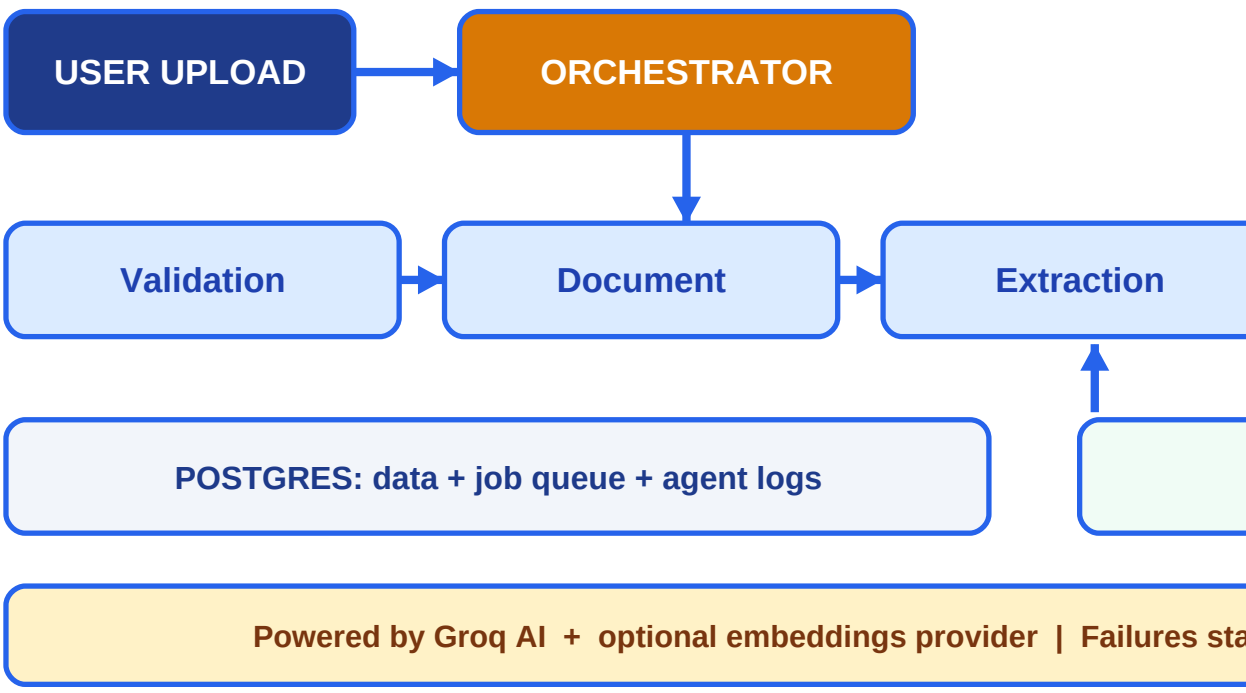

[x] Single LLM: hallucinates, no sources

The Agents (2/2)

Research	Answers with [S1] citations
Report	Tables by code. Narrative b
Benchmark	Company vs company. Peri
Orchestrator	Queues. Retries. Isolates ev

Each agent = one job, one test surface, one fallback.

PERSON 4

Measuring The Metrics

- 26 metrics per document
- Regex label parser = exact numbers
- Growth. Margins. Ratios. Cash flow.
- Every metric stores its source line.

```
Total revenue: $383,285 million
Evidence: the exact filing line is saved with the metri
```

PERSON 4

Built To Be Reliable

- AI down? Deterministic rules take over.
- Embeddings off? Keyword search works
- One stage fails? Pipeline continues.
- Background jobs + automatic retries.
- Secure: hashed keys. Scoped data.

PERSON 5

Why It Matters

- Trustworthy AI -- every claim cited.
- Multi-agent = robust by design.
- Built. Tested. Deployed. Free.
